

BAYCOM

A Lifeline in the Moments that Matter

BI-DIRECTIONAL AMPLIFIERS

MAKING BUILDINGS SAFE FOR FIRST RESPONDERS AND THE COMMUNITY

BAYCOM & CC&N offer complete Public Safety Radio Frequency (RF) solutions. When responding to a fire or emergency, the last thing your team needs to worry about is their ability to communicate with each other. We design custom Bi-Directional Amplifiers (BDAs), and install systems that distribute radio signals into and throughout a building, thereby ensuring Police, Fire and First Responders can communicate to address emergency situations that are critical to the safety of the rescue workers and the occupants of the building.

ANYWHERE, ANYTIME.

BAYCOM

A Lifeline in the Moments that Matter

BI-DIRECTIONAL AMPLIFIERS

MAKING BUILDINGS SAFE FOR FIRST RESPONDERS AND THE COMMUNITY

BAYCOM and CC&N have the engineering expertise to design and implement the advanced BDA system you need to ensure adequate indoor communications coverage.

DEDICATED TO YOUR SAFETY

Two-Way radios are vital instruments used by public safety personnel. RF devices give First Responders, such as Police, Fire and EMTs, efficient and secure communication connections, allowing responders to react quickly to crisis situations. Dependable and immediate communication require an in-building public safety network.

In the event of an emergency, ensuring the first responders can effectively communicate to protect you, your employees, and your customers is essential.
